INCI Name

Lauryl Glucoside

Raw material basis & Manufacturing process

Coconut/Palm kernel oil (Fatty alcohol); Glucose
Acetalization

Solvents:

Based on our actual knowledge of our production process, raw materials and equipment used, no solvent is used in the manufacturing process of the product

Vegetable origin

Plant:

Coconut

Botanical name:

Cocos nucifera

Part of plant utilized:

Fruit

Primary region or country of origin:

Asia, mainly Indonesia and Philippines

Wild or cultivated plants:

Cultivated and wild

Genetically modified (GM) Status:

GM modified plant varieties are not commercially available and therefore considered non-GM

PCR testing:

no

Pesticides:

No information, however status information is available for derivative product

- 1) excluding implications from manufacturing process
2) including implications from manufacturing process

According to ISO 16128 standard the contents of the product, including water are the following ones (%):

Natural Content	40 - 50
Natural Origin Content (1) (excluding implications from manufacturing process)	100
Natural Origin Content (2) (including implications from manufacturing process)	100
Organic Content	0
Organic Origin Content	0

The current statement lists the appropriate information based on best knowledge at the time of application. With reservations for developments and new scientific findings.

(*) The calculation takes into account intentionally added substances with a concentration greater than 0,1% in the final product. The numerical value of the renewable carbon content has been rounded to the unit.

(1) This calculation excludes implications from manufacturing process: certain processes like e.g. alkoxylation may be considered as not in accordance to the ambition of the green chemistry.

(2) This calculation applies the rules of the evaluation of the manufacturing process in accordance to the green chemistry on top of the pure naturality of feedstocks.
