ALLERGEN REPORT

PRODUCT NAME: Reed Diffuser Base*

PRODUCT NUMBER:

RIFM and IFRA have formally adopted the Quantitative Risk Assessment refined for fragrance ingredients identified as contact allergens, as the core strategy for primary prevention of dermal sensitization to these materials in consumer products. This methodology will be used to determine global fragrance industry product management practices following the current IFRA Standards for potentially sensitizing fragrance ingredients. The basis for the acceptable exposure limits are presented in this paper.

Fragrance Chemicals, which according to existing knowledge, are <u>most frequently</u> reported and well-recognized consumer allergens:
